

ABSTRACT

A detergent composition which has excellent stability; moisturizes the skin while giving thereto neither a taut feel nor dry feel after cleansing; and enables smooth finger-combing and does not give hair a rough feel after shampooing.

The detergent composition contains (A) an anionic surfactant and (B) trimethylglycine, wherein the components (A) and (B) are added at a weight ratio $(A)/(B) = 1/3.5$ or greater but less than $4/1$ and the pH of the original composition or the pH of the composition diluted with purified water to a concentration of use is adjusted to 2 or greater but less than 6.5.
